

AVERT C2

COMMAND & CONTROL

Configurable Dashboards and Applications Tailored to Streamline and Automate Security, Response, and Situation Management

One Platform, Countless Solutions

- Trusted and deployed in numerous industries to optimize security, operations, responses, and situation management.
- Monitor and control security, safety, operational, BIM, cyber, OT and other systems and sensors.
- Role-based, secure information sharing with internal departments, disparate facilities, or external partners.
- Accurate and effective responses through automated CONOPS and response plans.
- Federated architecture enables multiple departments or facilities to independently utilize the same system.

AVERT C2 Capabilities & Benefits

Federated Architecture

AVERT C2's unique ecosystem configuration allows numerous internal departments, regional facilities, or external partners to independently utilize the same system. Each organization can integrate their own systems and data, and decide who and when to share specific information with. This provides a centralized system that delivers multiple solutions by giving each department, location, or organization their own unique dashboards and capabilities.

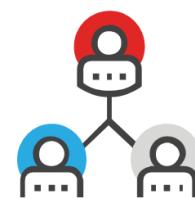

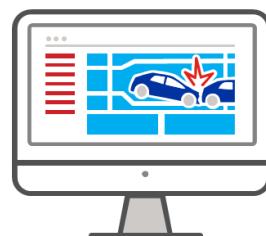

Comprehensive Awareness & Response

AVERT C2's open architecture and large integration list allows the system to ingest and display virtually any sensor feed. The solution correlates the data from a wide range of integrations and streamlines collaboration by aligning the system's sharing policies with existing MOUs to automatically consolidate and disseminate relevant data, enabling responders to make quick, informed decisions. When anomalous behavior is detected, AVERT C2 alerts users, triggers the appropriate response per SOPs, and displays relevant information on a custom dashboard.

"This new technology allows our maritime law enforcement officers to be more effective in enforcing conservation law and responding to emergencies."

- Martin J. O'Malley, Governor of Maryland

REPORTING

- Integrate and correlate disparate sensor feeds from the industries largest selection of connectors.
- Create advanced operational plans and templates, automated alerts, and configurable workflows or responses.

- Share custom dashboard views depending on roles, levels of access, and desired information.
- Respond collaboratively using automatically activated SOPs and real-time sharing policies.
