

AVERT CSIM

SITUATION MANAGEMENT

A Converged Security Information Management (CSIM) platform designed to make enterprise security management easier and more effective.

Situation Management Made Simple

- Trusted and deployed in numerous industries to optimize security, operations, responses, and situation management.
- A vendor, hardware, and protocol agnostic open architecture platform.
- Integrate, collect, filter, correlate and convert vast amounts of data to provide meaningful and actionable data to end users.
- Quickly send the right information to the right people using built-in Standard Operating Procedures and automated data sharing.
- Streamline security operations to reduce risk, manage security events in real-time and respond to incidents more effectively.

AVERT CSIM Capabilities & Benefits

All-Inclusive Integration Platform

AVERT CSIM has evolved to support hundreds of integrations and applications including, building management systems, radar/sonar, asset tracking, social media feeds and IT security management systems. Its open architecture software platform integrates data from virtually any security system, sensor, or networked management application, and actively correlates data from disparate security systems to provide actionable business intelligence that empowers stakeholders to make collaborative security decisions in real-time.

Streamlined Situation Management

There's no shortage of information coming into operation centers and each organization faces unique challenges when it comes to providing operational security. Too often, it's the quality of the data and the inability to correlate it quickly from independent sources that poses the greatest challenges. With specialized solutions to support IOT, global companies, smart cities, critical transportation infrastructure, and utilities, AVERT CSIM helps to manage complex security environments to minimize impact on operations. The platform goes beyond the limitations of traditional PSIMs to provide comprehensive enterprise-level security.

"[Our] mission is to promote the Safe & Smart City vision for Abu Dhabi using the latest in technology and innovation. The broad capabilities of [the CSIM] allow us to rapidly deploy and promote safety throughout the region."

- His Excellency Saeed Al Neyadi, Director General of Abu Dhabi Monitoring and Control Centre

CSIM Results

Implementing CSIM software results in a tangible return on investment that over time pays for itself. Savings realized include staffing efficiencies, reduction of false alarms, improved compliance and adherence to regulatory requirements.

1.6 M Employees Safer & More Secure

2.1T Dollars in Market Capital Protected

60 M Citizens Safer & Assets More Secure

AVERT CSIM enabled a Fortune 50 company to maintain its security force head count even though it has doubled the size of its physical campus in the last five years. This company realized a 66% reduction in response time and a 50% reduction in false alarms from access control systems.

Several transportation agencies have cut the time it takes to clear a traffic accident by nearly 50 percent using AVERT CSIM for situational awareness. Swifter clearing of a major traffic incident reduces the risk of follow-on accidents and injuries. Time, money and staff savings are exponential.
