

CONFIDENTIAL CLIENT HOSPITAL WITH 300+ FACILITIES

CASE STUDY

CASE STUDY SUMMARY

Vidsys is a comprehensive Converged Security and Information Management (CSIM) platform designed to make enterprise security management easier and more effective. Its capabilities extend beyond those of traditional physical security platforms, working to capture and correlate data from multiple physical, logical and IT security systems. Organizations can leverage Vidsys to support a wide range of use cases, including IoT-enabled Smart City development, logistics management, manufacturing, and supply-chain monitoring. The CSIM software platform collects, filters, correlates, and converts vast amounts of disparate data in real-time into valuable and actionable information for situation management.

OBJECTIVE

The client's objectives for this project were to: Leverage existing investments and avoid 'rip-and-replace'; Integrate disparate security systems into a common operating platform; Achieve return on investment savings through consolidation of security control centers; Reduce head count and the level of activity and responsibility for the Guards.

SOLUTION

The Web browser-based deployed Vidsys system efficiently addressed the primary project challenge of Managing and maintaining numerous disparate video and other security technologies. The Vidsys System: Controlled disparate security and building management systems; Managed risks associated with infant protection alarms, large crowds, and patient wandering; Prevented unauthorized access to secure areas; Enhanced equipment tracking to increase regulatory compliance; Meet duty of Care obligations for employees, staff and visitors 24/7.

RESULTS

ALL OBJECTIVES MET – All of the client’s objectives were successfully met.

INTEGRATIONS - The following systems were integrated into the Vidsys system : CCTV/ Video management system (Cisco), Access control (P2000), Fire alarms, Building Management (Metasys)
